FCC Proceeding 02-33

Dear Sir:

The proposed regulations will be a detriment to the Internet industry and I believe may set our country back as a nation at the forefront of technology. The Internet has become the best way to communicate across the world from day-to-day activities, business, personal, and research. Changing the USF fee to be based on bandwidth would put a heavy burden on the end-user and medium- to small-sized ISPs squelching the growth of the Internet. The goal of the E-Rate plan, one of the programs subsidized by the USF fees, provides a means to get Internet into schools, etc. so the general population can have access to the Internet. Changing the USF fee to bandwidth and extending its application to wireless last-mile loops will do more to make those the only locations that can afford to use the Internet.

As a nation of enterprising business we need to not only look to how to make money but also how to secure the future.

Sincerely,

/s/

Christopher Bozeman
Owner and VP
